NOTICE

En publant cet album nous n'avons pas l'idée de donner des modèles de vases, nous voulons simplement exposer un système de classement des profils, permettant de chercher des formes avec méthode et d'en trouver facilement et sûrement un nombre infini.

Pour établir ce classement, nous partons du principe que tout profil dérive forcément, soit d'une droite verticale, oblique ou horizontale, soit d'une courbe en forme de quart de rond, soit d'une combinaison quelconque de ces éléments.

La verticale nous donne un élément.

L'oblique nous donne deux éléments, suivant qu'elle est inclinée de droite à gauche ou de gauche à droite.

Le quart de rond nous donne quatre éléments, suivant que nous le prenons, soit à gauche du diamètre vertical d'une circonference, en haut ou en bas du diamètre horizontal, soit à droite du diamètre vertical, en bas ou en haut du diamètre horizontal.

Nous obtenons les sept traits élémentaires suivants :

que nous nommerons respectivement :

A B B' C C' D D'.

La ligne horizontale viendra limiter chacun des éléments.

De ces traits nous tirons les 7 formes de la 1^{re} série, composées d'un seul élément. (Voir 1^{re} série, pl. I.)
